TOXFREE WORK WITH TRAINRIGHT TO PROVIDE THE INDUSTRY FIRST VACUUM LOADING COURSE

This one and one and half day Vacuum Loading Course is a unique training experience developed through extensive industry consultation and delivered by highly experienced trainers to provide your operators with a strong understanding of Vacuum Loading Operations.

The course places a strong emphasis on Proactive Job Management, providing operators with the knowledge to successfully manage the various challenges faced in Vacuum Loading Operations.

The course includes both theoretical and practical components, our Vacuum Loading Course combines industrial knowledge and best practices with appropriate professional development. By the end of the course, operators will be able to effectively safely load and unload their vacuum units, understand how to avoid injuries and the need to maintain their vacuum units. Understand and take responsibility while maintaining a professional attitude and contribute to an effective work environment.

The course instructs students in the following technical and safety matters:

- The science of static electricity, how it relates to our industry; candidates will understand type's products that can form an explosive atmosphere and how to eliminate the risks of an explosion.
- How spills occur and what steps to take in order to prevent them from occurring.
- Understand the science of vacuum, how it equates to our equipment and how to apply those principals within various vacuum loading tasks.
- Explanation of second man responsibilities and managing fatigue by rotations. Using ergonomic concepts to vacuum a wide range of products.
- Procedures and etiquette of vac loading end of day procedures, how to leave the vehicle for the next operator and understand the importance not to cross contaminate products.

In addition, new operators will learn common faults of liquid rings, dry blowers, and vane pumps and how to fault diagnose. Candidates will be taught how to read and understand vacuum pressure gauges in either in KPA or inches of mercury. Our comprehensive course on vacuum awareness will train and prepare students for the technical and professional demands of operating vacuums units.

The course will also emphasize the following practices:

- Licencing requirements and chain of responsibility.
- Removing complacency from the workplace.
- The importance of fitness for work and being a part of a working team.
- The importance of completing job related paperwork and adding additional information.
- The course will give new employees to our industry a wealth of good information, teaching them good habits conveying our expectations of becoming a professional vacuum loading operator.
- Understand the importance of why reporting near misses, any incidents or accidents is critical.

The course is nationally accredited and delivered in partnership with a registered training organisation.

Successful completion of the assessment requirements will provide participants with a Statement of Attainment for the Unit of Competency MSMWJ303 Operate a Vacuum Loading System, which includes the following Skill Sets:

- MSMSS00006 Operate a vacuum loading system
- MSMPER200 Work in accordance with an issued permit
- MSMWHS110 Follow emergency response procedures
- MSMWH200 Work safely
- MEM09002B Interpret a technical drawing
