

# PROJECT SNAPSHOT

## TOXFREE CLEAN UP KOPPERS - NEWCASTLE

### The issue

As part of its biannual shutdown, Koppers Mayfield (Newcastle) required programmed cleanings of a Napthalene Tank, heat exchangers and pipe-work. The November shutdown also included the installation of a new on site cooling tower. Prior to demolishing the existing cooling tower, Industrial washing was required to remove residue.

### The solution

Toxfree supplied an Industrial Combo Unit, Heavy Vacuum Loader and 600HP 3 gear High Pressure Unit with bulk Interceptor bins. Over the 3-week shutdown Toxfree performed Industrial washing, flex-lance, high pressure pipe and duct cleaning, tank cleaning and stormwater pit cleaning.

### The outcome

Production efficiencies within the plant due to asset maintenance. The biannual shutdown will be ongoing for Toxfree along with reactive maintenance within the plant.

### Special Thanks

Shane Marston, John Blaga, Will Monaghan, Mick Belcher, Dave Taylor, Jimmy Laing, Murray Stokes, Don Meehan and the TES Kurri Crew.
