

# PROJECT SNAPSHOT

PORTERS CREEK HYDRO-BLASTING OF SPILLWAY

## The issue

In May the Toxfree Hunter Industrial Services business unit completed over 1000m<sup>2</sup> of hydro-blasting at Porters Creek Dam. The dam is 20 minutes inland from the NSW Coastal town of Ulladulla. The client was Shoalhaven Council and the contractor for the work was Lead Engineering and Construction.

## The solution

The scope for Toxfree was to lightly scabble the entire surface the spillway using our 2500 BAR High Pressure Water Blasting unit as part of a structure strengthening project. Works were performed using a hand-gun from an on-site 40 metre straight boom.

## The outcome

The project was a joint effort between the Toxfree Hunter and Albury/Wodonga business units. Toxfree staff, Shane Marston and Hayden Corrigan, were on site bringing the project in safely, on time and to customer specification.
