

PROJECT SNAPSHOT

TOXFREE PROVIDES SOUTH EAST WATER WITH SUSTAINABLE WASTE SOLUTIONS

The project

South East Water required waste solutions, including sewer cleaning and maintenance, sewer civil works, water civil works and mechanical and electrical requirements. The tasks required included 24/7 emergency response clearing and CCTV of sewer and property connection branches, CCTV of SE Water assets as well as scheduled cleaning, CCTV and maintenance of assets including wet wells, pump stations, sewer systems and gas checks.

The solution

Toxfree was able to provide all the required services with efficient costing as well as a large and young fleet. This included vehicles that were able to multi task, such as Jet and CCTV in the same unit, which is advantageous in assisting SE Water with their customer service requirements.

The outcome

Initially eight contractors applied for the work. This was then short listed to four and finally awarded to two contractors for completion. The Toxfree branding and professionalism along with reputation and ability to provide solutions for the project contributed greatly to winning the contract. The work has commenced and will continue to run for the next five years with an option of an additional two years.
